

ATS controller for Transfer Switching Equipment

ATyS C25/C35

SITE 1940 A

Why do you need Transfer Switching Equipment (TSE)?

Power outages can occur in even the most reliable networks leading to major losses and immense disruption across critical applications, including emergency systems, healthcare devices, server rooms or production lines. Transfer switching equipment together with the associated ATS controller is usually installed in a crucial path of an electrical installation. The safe control and switching between one power source and another is essential to guarantee electrical power to critical loads.

ATyS C25 039 A GB

Why choose a Socomec ATS controller?

Choose the switching expert

Switching has been in Socomec's DNA since 1922. We have engineered and manufactured 5 generations of transfer switches and work continuously on next generation technology. With vast experience in the design and development of transfer switching solutions, Socomec is the partner of choice when it comes to ATS controllers for switch type Class PC, circuit breaker type Class CB and contactor type Class CC RTSE.

Think quality first

The entire range of controllers has been created in France, ensuring the highest level of quality, design and performance. All ATS controllers undergo end-of-line testing and are evaluated extensively in Tesla lab; an independent laboratory specialising in the analysis of low-voltage equipment and assemblies. Tesla lab also houses facilities that puts equipment to the test against the harshest environmental conditions including water resistance, dust ingress, chemical exposure, shock and vibration.

Making life easier

With ease of use at the heart of product design, this range has been created to make life easier. We have placed particular importance on the ergonomics of our controllers and engineered them to provide intuitive, straightforward navigation combined with fast and assisted configuration.

DISCOVER THE **PERFECT** MATCH

A full Socomec ATS

Tested and designed to be optimised with
the full Socomec ATyS RTSE
(Remote Transfer Switch Equipment) range.

ATyS S

- 40 - 125 A
- Robust
- Compact

ATyS dM

- 40 - 160 A
- Modular
- Fast transfer

Programmable inputs

Connect to other products or buttons to adapt your transfer function

LCD screen

Visualise voltages measurements settings, and phase angle

MAIN FEATURES

ATYS C25 / C35 CONTROLLER

Modbus RS485 communication

Connect your product and collect the data

Start-genset contact

Integrated contact to start genset in case of source failure

Integrated push-buttons

For manual remote operations and testing

Power supply

From both source 1 & 2 sensing with optional 24 VDC input

Visible and intuitive HMI

With 12 clear LED instantly understand your installation status

Integrated external DPS

To supply a motorised switch (RTSE) up to 6A

ATyS r

- 125 - 3200 A
- 3 or 4 poles
- Robust
- Replaceable motor

TESTED ACCORDING TO IEC 60947-6-1

Our ATyS R products have been tested and certified according to TSE standards when associated with C25 / C35.

READY TO USE CABLE HARNESS

Reduce installation time with the Socomec harness which have been tested and designed specifically for use with ATyS r & C25 / C35.

ADD EXTRA

FORCE

TO YOUR TRANSFER
SWITCHING EQUIPMENT

ABOVE AND BEYOND STANDARD

Choose a **safe and reliable solution** for your transfer switch controller by selecting products tested to your local standards. The ATyS C25/C35 has been designed to meet and exceed the most demanding product safety requirements in a compact and competitive package. Engineered and built to comply with overvoltage category III, it can be installed at the distribution level, right after the main incomer. Moreover, thanks to its ergonomic design, the ATyS C25/C35 controller can be mounted wherever works best for you – whether on the door or on a DIN rail inside any enclosure.

The controller complies with IEC 60947-6-1 when type tested with a certified RTSE (such as the Socomec ATyS r range), IEC 61010-1, IEC 61010-2-201 and GB/T 14048.11 Annex C.

Adapted to the harshest environments, the ATyS C25/C35 ATS controllers are tested to the highest quality and endurance standards: -25 °C to +70 °C damp heat (95 % humidity) at 55 °C, salt mist severity 1, IK08.

FAST CONFIGURATION & USER FRIENDLY

Save time on your installation and commissioning with **fast and simple configuration**. The ATyS C25/C35 includes an interface that provides immediate visualisation of your installation's status, with a clear and intuitive HMI, and enables you to collect data through Modbus via integrated RS485 communication.

ADAPTED POWER SUPPLY

The ATyS C25/C35 saves you time and reduces costs thanks to its DPS (dual power supply) function which is integrated directly into the product.

With this function, the controller will supply motors up to 6 A with power from either source 1 or source 2. This ensures power to your RTSE motors - without the need for external modules - saving cabling time and cost.

The controller itself is self-powered from the voltage sensing on both sources (AC supply).

The controller can be switched on at all times with full communication and LED functionality - with the optional DC (Direct Current) power supply integrated as standard on the full controller range.
